May 10th, 2020 - International classification of functioning disability and health (ICF) is a framework developed by the World Health Organization (WHO) to provide a unified and standard language and framework for the description of health and health-related states. The overall aim of the ICF 2 is to define components of health and disability. It is a comprehensive, standardized, and multi-dimensional classification system that can be used across all health and disability fields. The ICF framework is based on the idea that health encompasses not only the absence of disease but also the presence of well-being. This volume contains the ICF 2 and provides an overview of its components and applications. The ICF 2 is widely used in research, clinical practice, and policy development to improve the understanding and management of health and disability.
The International Classification Of Functioning, Disability and Health (ICF) is a classification of health and health-related domains that provides a standard language for describing how people live with their health condition. It covers body functions and structures, activities, and participation from both individual and societal perspectives.

The ICF is a framework premised on the bio-psychosocial model that was endorsed by the World Health Organisation (WHO) in 2001 to give a comprehensive view of health.
